# Repellent anti insect Spray for Textiles,by SIL2U

Nanofor/ Biteprevent/ Biteprotect; Private label

#### SIL2U anti insect Spray for Textiles- Technology

- The Repellent anti insect Spray for textiles developed by the Success Gadget, using SIL2U technology, is a comfortable, versatile solution that is easy to apply to all types of textile fabrics, and already made garment without de-characterizing them both in appearance and odor level, like others repellents do. Through the silica particles, <u>the durability of the</u> <u>repellency effect is granted</u>, up to 3 washes after application, or 3 <u>months without the need to recharge until washing</u>, since it can stabilize the active principle inside the particles. Providing lasting protection against mosquitoes.
- The textile anti insect spray, SIL2U, is very effective in combating seasonal mosquito pests, or diseases as serious as malaria or dengue, and ZIka.
